Driving Greater Interoperability

TO STRENGTHEN CONNECTED HEALTHCARE

The majority of U.S. hospitals and acute-care facilities report strong efforts to improve interoperability and drive a more connected care experience, but there are opportunities to advance goals, according to new industry research by HIMSS Media.*

Here's what's on their minds:

Only 1/3 report the highest level of interoperability with 2 or more systems exchanging, interpreting and using exchanged data.

5 top interoperability goals

Optimize clinical workflows

Improve communication/ coordination of care

Meet regulatory compliance requirements

Improve patient satisfaction

45% **Empower employees** to make faster decisions

Effectiveness in achieving goals

report they are highly effective at leveraging technology to advance 1 top goal: **MEET REGULATORY COMPLIANCE REQUIREMENTS.**

report they are highly effective at leveraging technology to advance the other top goals.

LESS THAN

3 top priorities

Optimizing clinical workflows

Facilitating a single view of the patient

Enforcing health IT interoperability standards across care settings

What stands in the way? The perceived barriers:

Integrating new solutions with legacy systems

on average

Integrating data from multiple **EHRs**

Employee resistance to adopting new solutions

42% Keeping pace with patient expectations

of unstructured data is not accessible for patient care decisions

report managing unstructured data is a **KEY OBSTACLE** to improving interoperability and delivering a more

They are taking steps towards improving interoperability

are adopting an enterprise imaging strategy while

plan to adopt one

Leveraging an electronic health information exchange

Leveraging natural language processing/voice recognition

Moving to a single EHR platform

Using/pilot testing

Integrating point-of-care imaging and workflows

Planning

Drive connected care with a strong content and image management solution. Learn more at Hyland Healthcare.

Hyland

Produced by

H2MSS Media Hyland delivers the connected healthcare solutions that link scattered unstructured information (e.g. clinical documents,

medical images, etc.) from all corners of the enterprise to core systems – allowing you to see your whole patient and

improve clinical decision making. Hyland is the only vendor that brings content services and enterprise imaging solutions

together, providing you with a single technology framework for all of your unstructured content needs. More than half of

sponsored by Hyland Healthcare, January 2019. This research was conducted among individuals in IT,

business and clinical roles in hospital and acute-care facilities across the nation.
